

Tasamur

تسامر

Global social platform identity. Modern, neutral and non-religious, with a restrained geometric character.

SYMBOL

ARABIC LOCKUP

Core marks

The symbol is formed from four repeated geometric units around an open shared center. The horizontal English and Arabic lockups are the primary named configurations.

ENGLISH - PRIMARY HORIZONTAL LOCKUP

ARABIC - PRIMARY HORIZONTAL LOCKUP

65%

Wordmark visible height relative to symbol height

15%

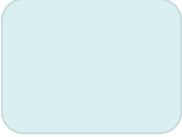

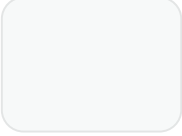

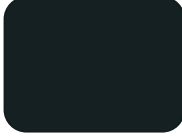

Horizontal gap relative to symbol height

RTL/LTR

Symbol leads English; symbol sits on the right in Arabic

Color system

Primary Teal is the main identifying color. Supporting colors are reserved for interface and background contexts; they do not replace the approved logo colors.

	Primary Teal #0A7780 RGB 10, 119, 128		Deep Teal #075E66 RGB 7, 94, 102
	Soft Teal #D9EFF0 RGB 217, 239, 240		Dark Background #101517 RGB 16, 21, 23
	Light Background #F7F9F9 RGB 247, 249, 249		Dark Text #152022 RGB 21, 32, 34
	Light Text #EFF7F6 RGB 239, 247, 246		

ON LIGHT

Primary Teal is preferred. Black is the monochrome alternative.

ON DARK

White is preferred for maximum clarity. Teal has 3.47:1 contrast against #101517 and is acceptable for large graphic marks, but white is the default.

Clear space & minimum size

Keep the identity away from surrounding text, controls and edges. The rule is deliberately simple so it can be reproduced consistently.

CLEAR SPACE

Tasamur

x = 25% of the symbol height. Keep at least x of clear space around the complete lockup or symbol.

SYMBOL MINIMUM

16 px

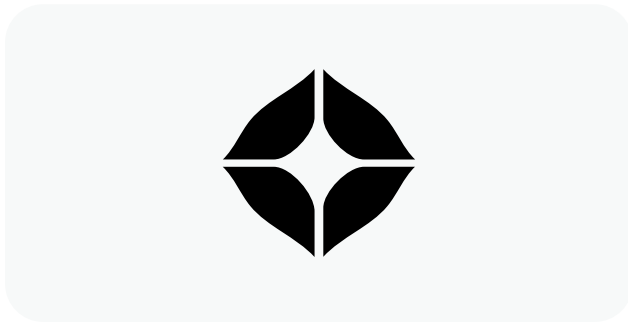

Minimum recommended digital size. 24 px+ preferred where space allows.

HORIZONTAL LOCKUP MINIMUM

96 px wide

Minimum recommended digital width. 128 px+ preferred for branded UI.

Monochrome & symbol-only use

USE THE SYMBOL ALONE FOR

- App icon source
- Favicon
- Compact UI locations
- Account/avatar identity
- Very constrained spaces

USE THE FULL LOCKUP WHEN

- The audience may not know Tasamur yet
- The brand name is needed for recognition
- Website headers, launch material or formal identity contexts

WORDMARK TYPOGRAPHY NOTE

The Tasamur wordmarks use vector outlines derived from **Readex Pro SemiBold 600**. This is a branding choice only. It is **not** the default Tasamur application/UI typeface. Web, Android and iOS typography should continue to follow Mastodon and system-platform practices unless intentionally changed later.

Incorrect usage

Do not alter the approved geometry or use visual effects that change the character of the mark.

Do not stretch or squash

Keep the symbol and lockup proportions fixed.

Do not rotate

The symbol orientation is fixed.

Do not recolor arbitrarily

Use Teal, Black or White only for logo assets.

Do not add effects

No gradients, shadows, outlines, glows or bevels.

Do not change lockup spacing

Use the approved 65% wordmark height and 15% gap relationship.

Do not modify the symbol

Do not rearrange modules, close the center or change curves.

Do not replace the wordmark randomly

Use the supplied outlined wordmark assets for official marks.

Do not treat branding type as UI type

The wordmark font does not define the app typography.
